Exiger Tech

Availability: 12 weeks

Job Application for Software Developer Co-op

October 31, 2021

Dear Hiring Manager,

I am pleased to apply for the 12 week co-op position for software developer at the Exiger Tech company. I am currently enrolled in my second year of Computer Science at X University, and I have one year of experience in programming and web development.

During my first year of university, I took several courses about web development on Udemy besides of studying Python, Java, OOP, and Data Structure. I have dedicated myself to study and I have successfully finished 3 web applications. One of them is the website that can help users create and write blogs. I found this is an interesting project, because in the future, it can help me save a lot of experience that I have through out my university life. I also shared this project with more than 50 people and they are all satisfied with my work. By doing side projects, I explore with many different technologies, and gain the ability to learn anything faster and more efficient.

Besides programming, I also experience with some labour works, such as kitchen helper, waiter, and construction worker. This jobs help me earned some money, but it also give me valuable experience in the workforce. Although those jobs do not help much in programming, they provide my problem solving skills, working under pressure, and communicate with co-workers. Last summer, I worked for a house innovator company, and I have increased their revenue by 20%.

My resume and transcript are attached. I hope we can further discuss this with you in an interview.

I appreciate your time and consideration!

Sincerely,

An Hoang
